Ce va afisa urmatoarea secventa de cod? Explicati.

```
public interface A {
      void Execute();
public interface B {
         void Execute();
public class AB:A,B {
      void A.Execute() {
               Console.WriteLine("A");
      void B.Execute() {
                   Console.WriteLine("B");
class Program {
        public static void Main(string[] args) {
                    A a=new AB();
                    B b=new AB();
                    AB ab=new AB();
                    a.Execute();
                    b.Execute();
                    ab.Execute();
```

- a) ABAB
- b) ABB
- c) Eroare
- d) ABA

## Explicatie:

Eroare, nu putem apela ab. Execute() pentru ca nu e precizat explicit ce interfata se va folosi.
